

2022 年 6 月六级考试真题答案速查（第 1 套）

Part I Writing

参考范文：

In contemporary society, the phenomenon of cultivating new skills has been brought into attentive public concern. Taking a look around, one can find examples too many to enumerate. The most notable instance might be that the elderly is gradually learning how to use smart phones to absorb innovative ideas. It is evident that the causes are diverse.

Numerous illustrations can be given, but this will suffice. The idea that the development of new skills plays an essential role in our daily life. Take the elderly for example, if these senior citizens intend to travel around freely, it is advisable for them to learn how to use smart phones, as all residents need mobile phones to provide health certificates when visiting large shopping malls or other important places. Meanwhile, with the high-speed development of contemporary society, competitions and challenges impose high pressure on everyone, especially for those young adults who are in need of decent jobs, thus leading them to improve their personal abilities by keeping learning new skills.

By and large, it is of utmost significance to put great emphasis on the cultivation of new skills. For students, it is beneficial for them to better adapt to the society and improve their competitiveness. Only by doing so, will we have more opportunities and a bright future.

参考译文：

The Nanjing Yangtze River Bridge is the first railway and highway combined bridge across the Yangtze River designed by China and built with China-made materials. The upper 4-lane highway bridge is 4589 meters long, and the lower double-track railway bridge is 6772 meters long. The railway bridge connects the original Tianjin-Pukou and Shanghai-Nanjing railway lines, shortening the time to cross the river by train from one and a half hours to two minutes now. The bridge is not only an important hub for the communication between the north and south but also one of the famous scenic spots in Nanjing. The completion of the Nanjing Yangtze River Bridge marks a leap in China's bridge construction, dramatically facilitating the exchange of goods and people on both sides of the Yangtze River, and playing a tremendous role in promoting economic development and improving people's lives.

Part I Writing

参考范文：

In modern society, it is increasingly common that more and more people are willing to lend a helping hand to those in need. In my perspective, the reasons behind this phenomenon are varied.

In the first place, there is no doubt that this tendency results from the overall improvement of our national quality. To be more specific, providing help to those in trouble has created a positive atmosphere in which everyone is willing to offer assistance to others within their ability. In addition, just as the saying "Giving roses to others leaves fragrance in one's hand" goes, when we do something for our friends who are trapped in tough circumstances, we could also attain spiritual satisfactions. Epidemic prevention and control is an obvious example. In the face of the severe epidemic, Chinese have made every effort to help the severely affected areas with medical supplies, personnel and psychological assistance, which brings spiritual wealth to the whole nation simultaneously.

To sum up, there are many well-documented reasons why an increasing number of people in this society spare no effort to give a hand to those in adversity. It is reasonable for us to firmly believe that we will have a bright and promising future if we continue to appreciate the importance of helping others.

Part IV Translation

参考译文：

With a total length of 50.82 m, a span of 9.6 m and a width of 37.37m, the Zhaozhou Bridge was built in the Sui Dynasty around 605 AD. Li Chun, a talented constructor, designed and supervised its construction. The Zhaozhou Bridge is sophisticated yet elegantly constructed with a major arch in the middle and two minor ones on its end which help to ease the flow of water, lighten the bridge and cut the use of stone material. Since the completion, the bridge has gone through floods and earthquakes, but remains safe and sound in its main structure and still available in use. The Zhaozhou Bridge is a pioneering work in the world history of bridge construction and a masterpiece of Chinese ancient civilization. Its similar bridge did not appear until the 14th century in Europe, over 700 years later than the Zhaozhou Bridge.

Part I Writing**参考范文：**

Recent years have witnessed the increase in the number of people who choose to live an environmentally friendly lifestyle. To illustrate, residents in big cities and countryside try to live a green lifestyle and curb carbon emissions where possible. Instead of driving or taking a taxi, they always take public transport, cycle, or walk to meet their daily needs. From my perspective, a number of reasons can be collected to explain the trend and this kind of lifestyle will undoubtedly bring benefits to us.

In the first place, the popularity of this eco-friendly lifestyle is bound up with the ever-increasing awareness of environmental protection. People have realized that environmental problems like global warming has become a burning issue, threatening all forms of life. Another contributing factor is that more and more companies are creating products with recyclable materials to help people live a green lifestyle. Without any doubts, both individuals and the whole society are the beneficiaries of eco-friendly living. For instance, using energy-efficient appliances and LED light bulbs in the home is beneficial to saving money and the sustainable development of our community.

In conclusion, there are many well-documented benefits of adopting a green lifestyle and the government should implement a package of policies to encourage more people to live in a greener way.

Located 15 kilometers southwest of Tiananmen Square, the Lugou Bridge, across the Yongding River, is the most ancient stone bridge with multiple arches in Beijing. It was built originally in 1192 and reconstructed in 1698, supported by 281 pillars, each of which has a stone lion and more lions hiding on its head, back, abdomen or claws. These stone lions are so vivid with various postures that they have been recognized as fine works of art in stone carving. The stone lions on the bridges are so innumerable that there is a saying goes, “The lions on the bridge are out of count”. Not only is the bridge famed for its aesthetic features, but also well designated as a monument in the architectural history of stone bridges.
