

2021 年 12 月四级考试真题 (第 1 套) 参考答案

Part I Writing

参考范文:

To enrich our life on campus and improve our public speaking skills, the Student Union is planning to hold a speech contest in December 2021. Hereby, I would like to put forward my proposal for organizing the speech contest. The details of my proposal are as follows.

All students have access to the contest. There will only be twenty participants, however, qualified for the final contest after winning a preliminary—a 3-min prepared speech on “My Most Unforgettable Experience”.

When it comes to the final contest, the schedule will be divided into two parts for each contestant. The first part is a 5-min prepared speech on the theme of “The Power of Ideas”, and the second part a 2-min Q&A session where contestants are required to answer questions raised by judges regarding their speeches.

Judges, made up of three excellent professors, two club leaders and the champion of the 2020 contest, will evaluate the contestants’ performances according to their pronunciation, accuracy, fluency and speech skills.

I’m convinced that the contest will be a great success through careful preparation.

Part IV Translation

参考译文:

Dujiangyan, located on the Minjiang River in the western part of the Chengdu Plain, about 50 kilometers away from the city of Chengdu, was originally constructed in the third century BC. Its uniqueness lies in the fact that it can control water flow without the use of dams. For more than 2000 years, Dujiangyan has been playing an effective role in flood control and irrigation, making the Chengdu Plain a fertile land free from drought and flood and one of the most important grain-producing areas in China. As the oldest, still-in-use, non-dam-control water irrigation system in the world, Dujiangyan project embodies the wisdom of harmonious coexistence between Chinese people and nature.

Part I Writing

参考范文:

Kicking off college life can sometimes cause much anxiety in the heart of a freshman because of all the unknowns. In order to help the freshmen adapt to the new environment and academic studies, the college will organize a one day orientation program.

The orientation events are designed to offer students an overview of the complete realm of college life, ranging from academic to social activities. For one thing, through campus maps and guided tours, new students will become familiar with both physical locations and the functions of school buildings. For another, a variety of activities, including lectures, icebreakers and parties, will be organized specially for freshmen. Academic lectures given by distinguished professors will offer students a general picture of college's academic life. Through lectures shared by club leaders, students can learn about the various student organizations in which they can be involved. Parties or icebreakers will help them expand circles of friends and release anxiety.

All in all, the orientation program serves as a guide to new college life. The college will use all campus resources to ensure its success.

参考译文:

The Grand Canal is the longest man-made river in the world, running from Beijing in the north to Hangzhou in the south. It is one of the most magnificent projects in Chinese history. First built in the 4th century BC, the Grand Canal was completed at the end of the 13th century AD. At the very beginning, it was built to transport grain, and later it was used to transport other goods. Thus the areas along the Canal gradually developed into the industrial and commercial centers of China. For a long time, the Grand Canal has played an important role in the economic development of China, and has greatly promoted the personnel and cultural exchanges between the North and the South.

2021 年 12 月四级考试真题 (第 3 套) 参考答案

Part I Writing

参考范文:

Last week, the Student Union organized a school project of collecting used books on campus, attracting a large number of students from different departments to participate.

At the beginning, the host highlighted the significance of collecting second-hand books from the perspectives of affordability, accessibility and environmental awareness. Then, several representatives shared their own viewpoints and experience about how to acquire needed used books. And last came the most exciting activity of exchanging books with students around, a process where students can release pressure and make more like-minded friends.

Clearly, the project was aimed at collecting used books and then offering them to others in need. Despite the rising popularity of e-books and digital publications, traditional printed books are still not exactly cheap. Using less expensive second-handbooks is therefore a great way for college students to save a pile of money. Furthermore, a large proportion of used books of different types are in good condition and can be used for a second or even a third time.

In conclusion, the project was a great success and achieved good results.

参考译文:

Karez is a water conservancy system in the arid region of Xinjiang, in which the wells are connected by underground channels. The system collects a large amount of rainwater and melted snow that seep into the ground in spring and summer, and channels them to the surface by the natural slope of mountains for irrigation and meeting people's daily water needs. Karez reduces the evaporation of water on the ground and causes little damage to the earth's surface, thus effectively protecting natural resources and ecological environment. Karez embodies the wisdom of our people living in harmony with nature, and is a great contribution to human civilization.
