

## 2023 年 6 月四级考试真题答案速查（第 3 套）

**Part I Writing**

## 参考范文：

Online education has grown by leaps and bounds in recent years. Some college students revel in online classes while others struggle with them. Personally, online education is both a blessing and a curse.

One of the biggest strengths of taking online classes for college students is the flexibility to complete coursework. Another advantage of online education is that it allows schools to reach out to a more extensive network of students, instead of being restricted by geographical boundaries. Students, thus, are able to attend classes from any location of their choice. However, one of the biggest challenges of online learning is the struggle with focusing on the screen for a long time. Additionally, students are likely to suffer from a sense of isolation because there are minimal interactions between students and teachers in online courses.

Therefore, it's imperative for the teachers to keep their online courses brief, engaging, and interactive to help students stay focused on the lesson. Furthermore, universities should offer various forms of communication between students, peers and teachers to reduce the sense of isolation.

## 参考译文：

China attaches increasing importance to life-long education, and the development of continuing education is an effective way to build a life-long education system. As a training base for talents, universities have advanced teaching concepts and superior teaching resources, so they should become the main body of continuing education. Therefore, in recent years, many universities have adapted to the needs of society, strengthened communication with employers, and tried to explore a new way to develop continuing education in line with China's national conditions in order to make continuing education play a greater role in the national development strategy.
